Efficiency and Flexibility:  
The role of Cogeneration in the Clean Energy Package

On behalf of
THREE MAIN GOALS

- Putting energy **efficiency** principle first
- Demonstrating **global leadership** in renewable energies
- Delivering a **fair deal** for consumers

**Aim of the Package**

- For the EU to lead the clean energy transition
- To cut CO₂ emissions by at least 40% by 2030
- To modernise the EU's economy and delivering on jobs and growth for all European citizens
Efficiency and Flexibility: The role of Cogeneration in the Clean Energy Package
Ensure that the “Clean Energy for All Europeans” package delivers positive outcomes:

**On the Energy Efficiency first principle**
- Strongly support the principle of energy efficiency first – however this should be applied consistently across the different pieces of legislation in the package

**On renewable energy leadership:**
- Greening of the gas network complemented by energy efficient technologies like cogeneration will be key for cost effective decarbonisation

**On empowering energy consumers:**
- The Package should better reflect the different needs of domestic, public, commercial & industrial consumers allowing them to become the central actors of the energy system

**On the Energy Efficiency Directive Article 7:**
- An opportunity for promoting self-generation through Combined Heat and Power
- Primary Energy Factor review advocate for a transparent and robust methodology
Thank you!
