

MINISTERSTWO ENERGII

Energy clusters

– case of Poland

Andrzej Piotrowski

Deputy Secretary of State

The major goal of energy clusters

is to find an efficient way for implementation of a distributed energy generation scheme being instrumental in balancing supply and demand

while taking utmost of the local resources

and of unleashing enterprising spirit in suburbs and rural areas.

Energy
clusters

increase awareness of
environmental issues

promote integration of
renewable energy resources
with the grid

Energy Cluster

Flexible structure of business cooperation

Synergies, gains and ways for supplementing each other and developing common value

Easy to join and easy to leave

Platform for involvement of municipal administration without forcing it to enter business activities

Platform for cooperation with Universities and research centers

Way to involve but avoid domination by large corporation

legal entity
