Europe

Solar PV and permitting

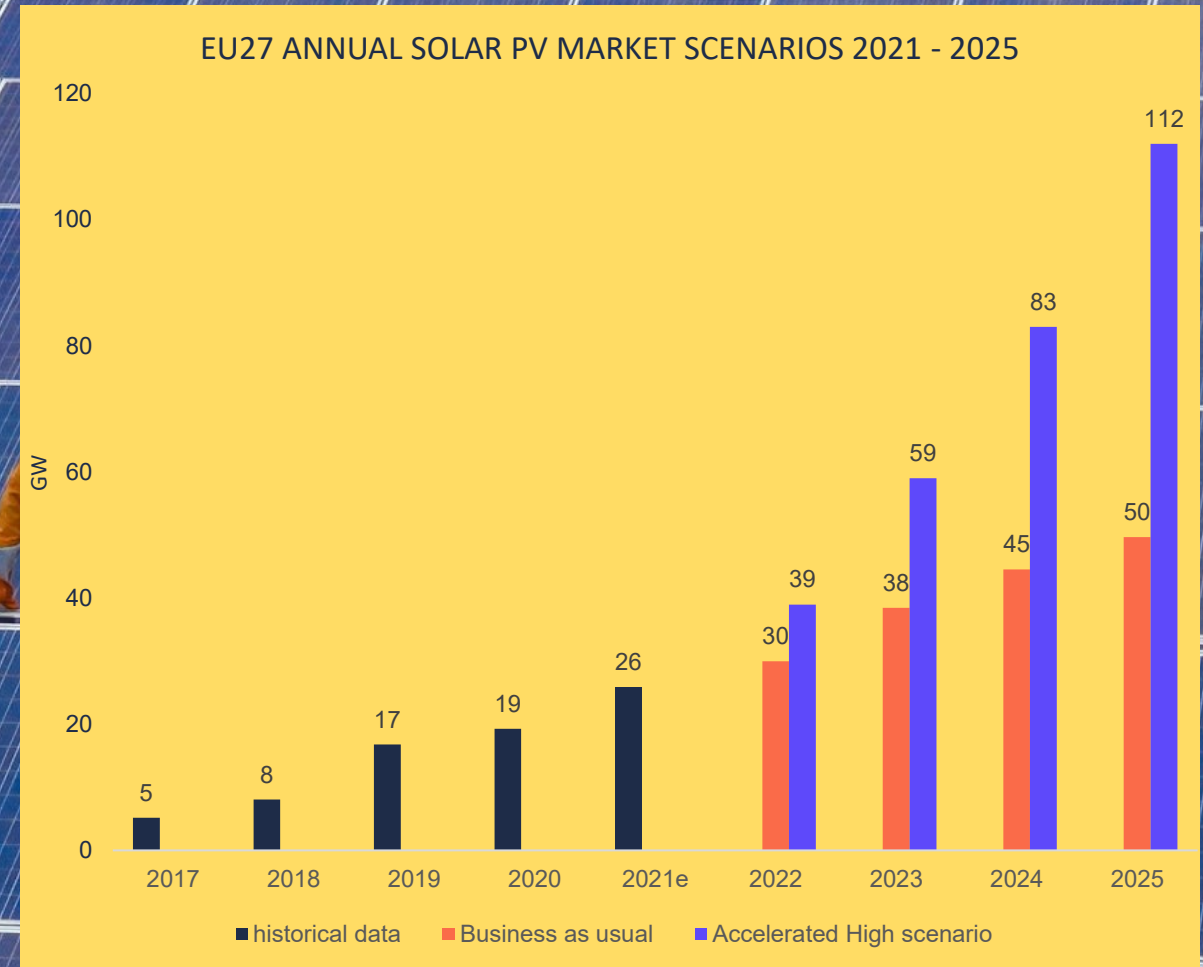

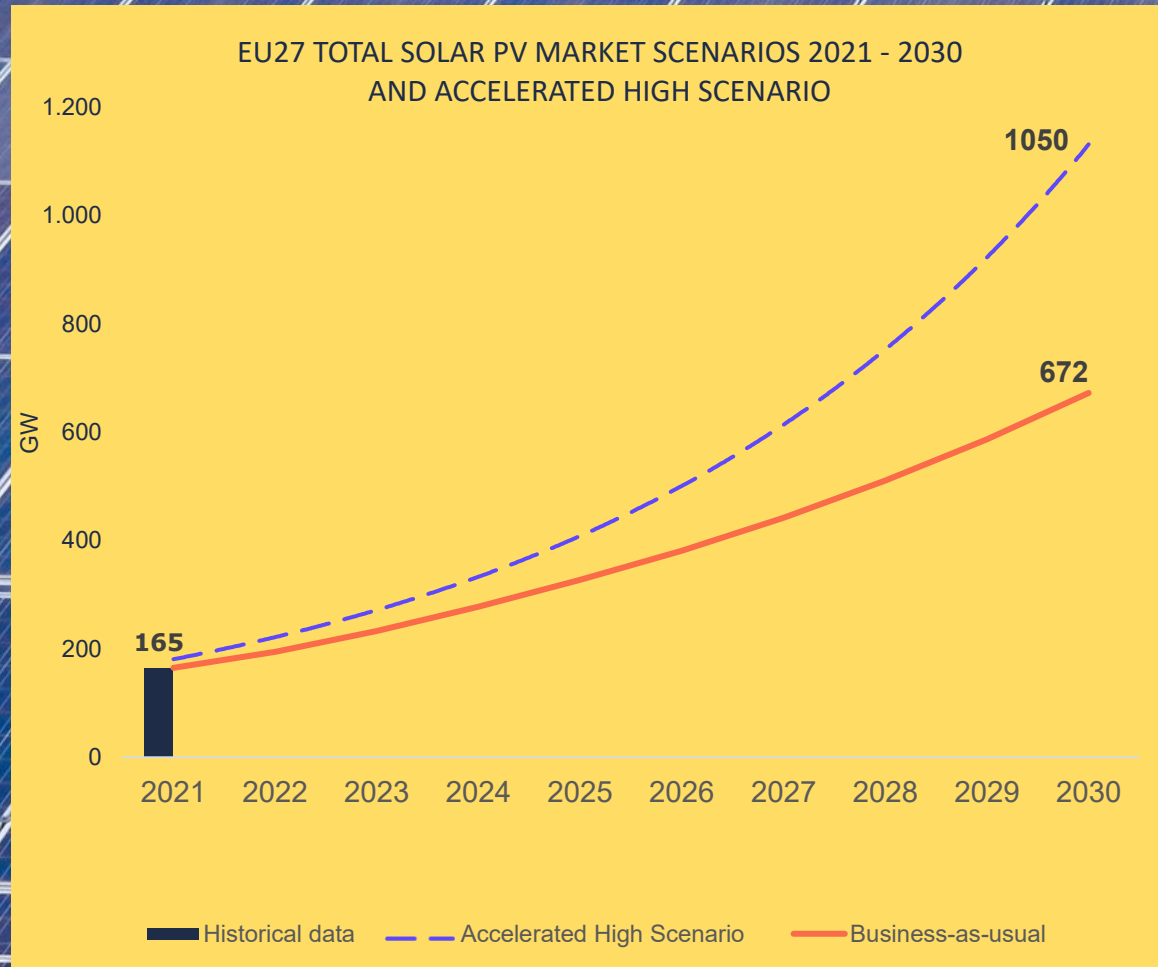

EEF event

15th March 2022

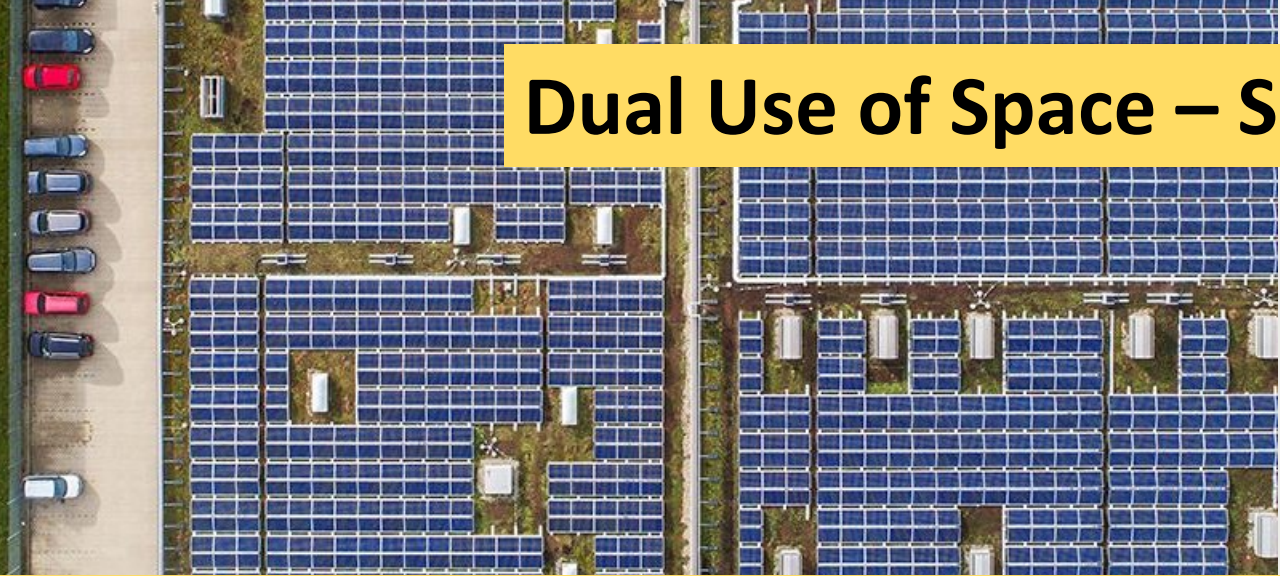

Walburga Hemetsberger, CEO SolarPower Europe

Need for accelerated solar deployment

Dual Use of Space – Solar's versatility and fast scalability

Solar Roofs: 400 GW by 2030

Floating PV – 200 GW if deployed on 10% of the water reservoirs and dams

Agri PV – 900 GW with only 1% of the arable land occupied

Best practices can **mitigate PV impact on land** and even provide **positive environmental benefits**.

- Identify **go-to areas for solar PV deployment** → fast tracked procedures
- **Streamline bureaucratic procedures**
- Qualify all solar projects as **projects of public interest**
- **Grids:**
 - Short-term: **freeze grid connection costs** for solar & storage projects
 - Mid-term: incentivise system operators to use more flexibility sources

Thanks for listening

Walburga Hemetsberger
CEO, SolarPower Europe
