Flexibility solutions in the Electricity Market Design reform

European Energy Forum, 23 May 2023

EUGINE – Representing Manufacturers of Flexible, Dispatchable Power Plants

Flexible, dispatchable renewable power

For an Electricity Market Design that ensures Reliability and Adequacy

Our proposals

-  Promoting all climate-neutral solutions that provide flexibility.
-  Triggering investments in adequate firm and flexible capacities.
-  Designing flexibility support schemes that reward the availability of a service.
-  Recognising the benefits of “behind-the-meter generation”.
-  Designing a European assessment of flexibility needs that contributes to security of supply.
-  Establishing “National flexibility targets” supported by a clear roadmap.
